WitchOps

Azure - Terraform - GitHub - DevOps Consulting

Infrastructure magic. Engineering precision.

DevOps by design. Magic by reputation.

Founder-led engineering reviews

WitchOps helps engineering teams troubleshoot unreliable delivery pipelines, improve Terraform implementations, modernize Azure infrastructure and plan complex GitHub migrations.

Primary consulting services

Pipeline Divination: CI/CD Pipeline Diagnostics. One repository, one pipeline, up to three hours. Written findings and priorities.

Infrastructure Alchemy: Azure & Terraform Architecture Review. One repository, up to three selected modules and one environment; up to six hours.

Migration Ritual: Azure DevOps to GitHub Migration Readiness. Up to five repositories and three pipeline configurations; up to eight hours.

Assessments exclude production changes, migration execution and guaranteed repair. Final scope, price, access and payment terms are agreed in writing.

Founder experience and documented prior outcomes

Bailey Fitchett brings 20+ years across software, infrastructure and enterprise delivery. Prior engagements include:

- Migration of 30+ repositories from TFS and Azure DevOps to GitHub.
- More than 50% less provisioning time and approximately 95% fewer deployment errors through standardized Linux provisioning at Bottomline Technologies.
- Azure modernization spanning six applications and multiple environments.
- Enterprise AI integration within established Azure and Terraform infrastructure.

Prior professional engagement results, not WitchOps customer outcomes or guarantees. Independent demonstrations are labeled separately.

Relevant expertise

Azure | Terraform / Terragrunt | GitHub Actions | Azure DevOps | Python | Linux | GitHub Advanced Security | identity and private networking | monitoring and recovery
